

DIALOG 3G™ WIRELESS RF software

The **Dialog 3G™** software by **Greentree Applied Systems®** and the Dialog 3G under the glass water meter is a winning combination for any Automatic Meter Reading (AMR) application.

The **Dialog 3G** software is specially designed for utilities and automatic meter reading making the 3G systems the easiest to implement and use.

Dialog 3G represents an innovative approach to the time consuming and tedious process of gathering meter reads. The meter reading information is stored within the handheld or laptop computer for downloading to the utility billing system.

The **Dialog 3G** software consists of two separate MS Windows® software packages: **RMSWIN®** for route meter reading and the **DIALOG 3G Technician®** for diagnostics and installations. Both software packages can be installed and used without extensive training or learning – a plug and play approach to AMR.

The **Dialog 3G RMSWIN** software interfaces with most billing systems software for a complete meter read to billing connection.

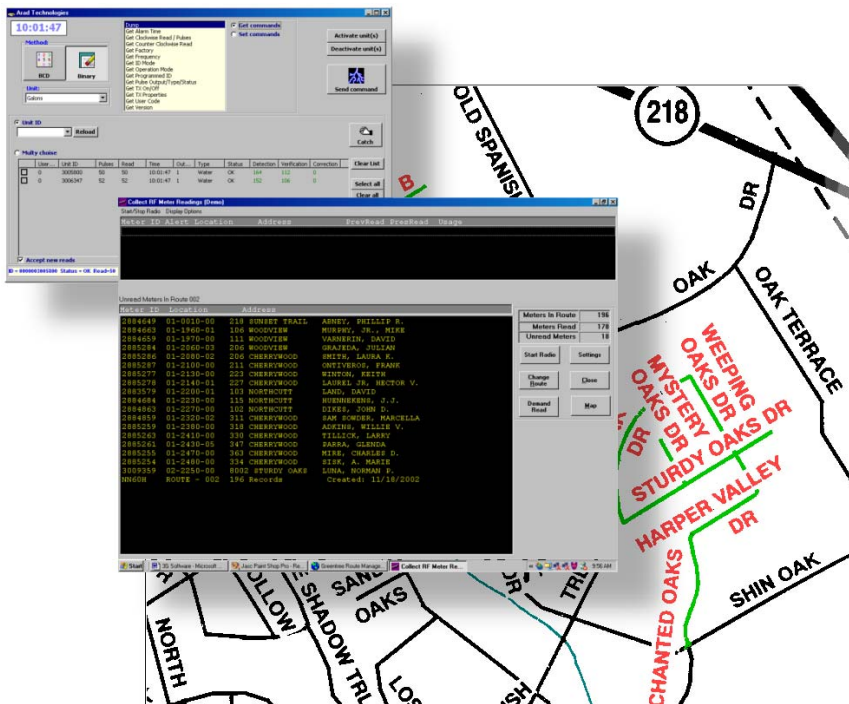

Dialog 3G Software Features

Windows® compliant software
10,000 account route system
Reports:

- Route Reads
- Exceptions (No Reads)
- Orphans
- Alerts
- Meter reader messages

Street Map Application
Flags and Alerts :

- Leaks
- Reverse Flow
- Tamper

DIALOG 3G™ WIRELESS RF software

RMSWIN Route Software

Billing System Bridge Creator

The **Dialog 3G** route software for vehicle systems is a simple to use Windows program that interfaces easily with most billing systems software.

It has a built in interface creator for generating the right output files needed by the billing program being used.

Street Map Interface

The route can also be placed on a local street map making the process of reading the route simple and trouble free.

Multiple Report Generation

The program generates multiple reports based on the need of the utility. With the report generator, missed reads, orphans and alerts can be readily accessed for follow up.

10,000 Accounts per Route

The account listing per route is large enough to cover most route applications. Multiple route files can be uploaded to expand the numbers beyond the 10,000 limit.

Handles duo COM Port Interfaces

RMSWIN can handle two RS232 inputs or USB (as COM ports) which allows for duo receiver input into the software program.

DIALOG 3G TECHNICIAN SOFTWARE

Diagnostics software for programming or troubleshooting the water meter radio.
